Cervical Cancer Primary Prevention

Our goal

- Increase demand and uptake of HPV vaccination
- Eliminate cervical cancer

Global
HPV **CANCER**
FREE

Our vision

- Leverage ACS's experience in the US globally to ensure:
 - ✓ physicians recommend the HPV vaccine routinely and confidently
 - ✓ parents demand their children be vaccinated
 - ✓ community influencers advocate for its access and uptake
 - ✓ policy-makers mandate the HPV vaccine in national, sub-national programs

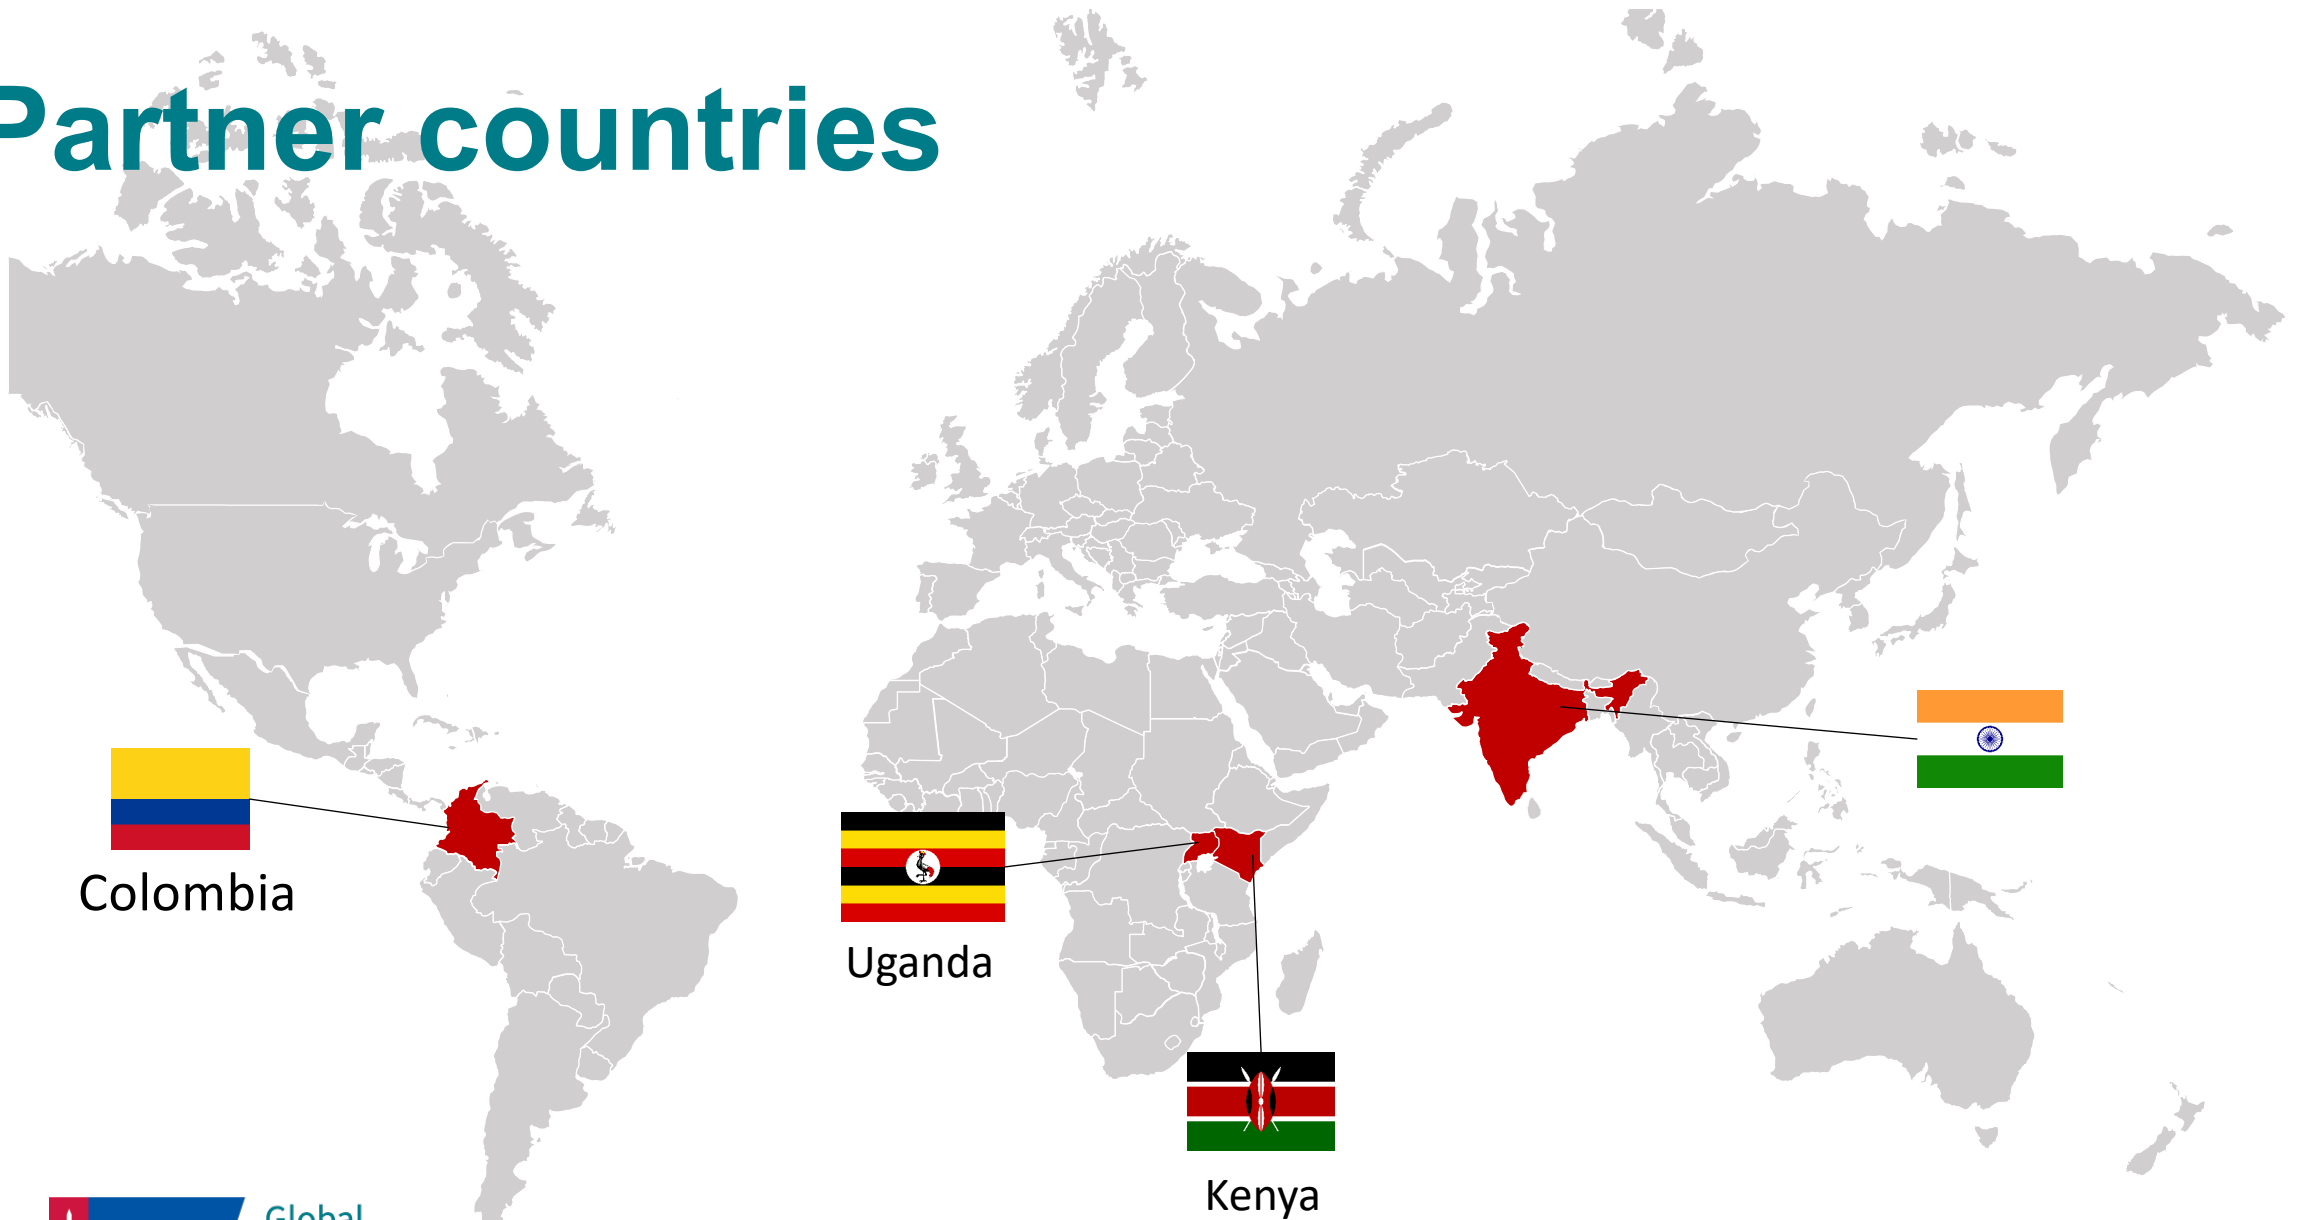

Our objectives

1. **Normalize** HPV vaccination as cancer prevention
2. **Strengthen** cancer organizations so they can prioritize HPV vaccination
3. **Mobilize** cancer organizations to lead collective action
4. Support partners to **sustain** high HPV vaccination rates

Partner countries

Colombia

Uganda

Country advocacy

- Ensure HPV vaccine is included in routine immunization plans
- Ensure sustained and adequate resources for HPV vaccination programs for continued uptake and adherence

ACS courses

- Cervical Cancer Prevention Fundamentals
- Persuasive Communications for HPV Vaccination
- Effective Advocacy to Advance HPV Vaccination

4 Key messages for HPV vaccination

HPV vaccination is:

- 1. Cervical cancer prevention**
- 2. Safe and effective**
- 3. Best given to girls ages 9 to 14**
- 4. 2 doses, six months apart**
