

# Investing in Global Cervical Cancer Prevention: Resources for Low-Income and Lower Middle-Income Countries in 2021

**Together for Health**

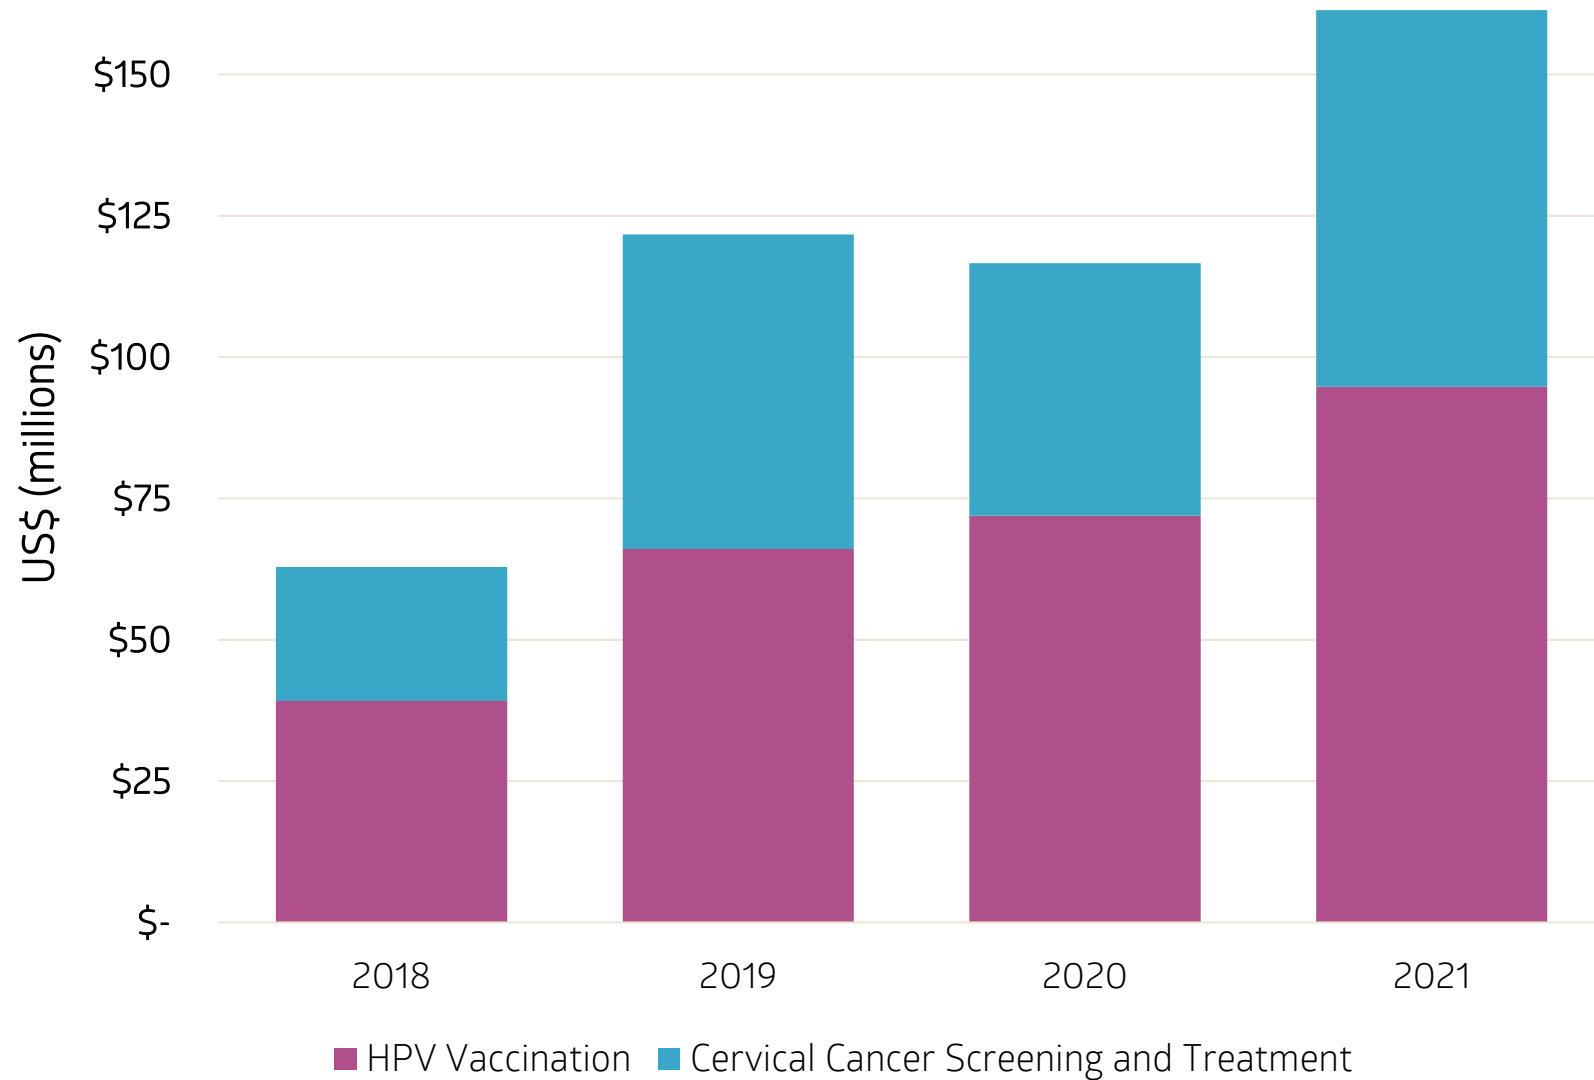

November 17, 2022

---

## Key Findings

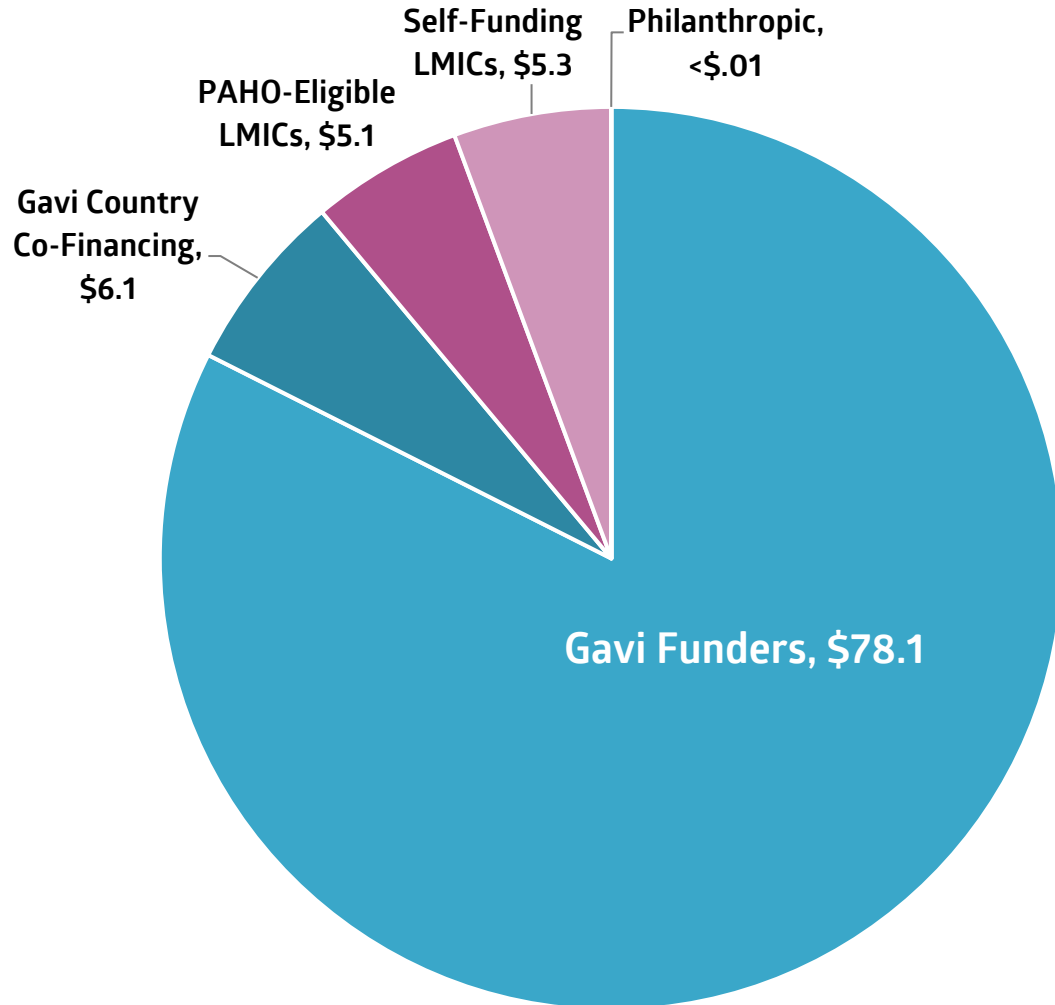

- **2021 marked the first full year since Member States of the World Health Organization approved the launch of an ambitious strategy in November 2020 to accelerate the global elimination of cervical cancer through the scale-up of effective prevention interventions.**
- **US\$ 94.7 million was invested in HPV vaccination programs and US\$ 66.6 million was invested in cervical cancer screen-and-treat programs in 2021, both representing large increases over 2020.**
- **Despite these increases, at the current pace only around \$1.6 billion (15%) of the \$10.5 billion necessary to achieve 2030 targets for cervical cancer elimination in low- and lower middle-income countries will be mobilized.**

## Total Funding for Cervical Cancer Prevention in LICs/LMICs has increased almost \$100 million since 2018.

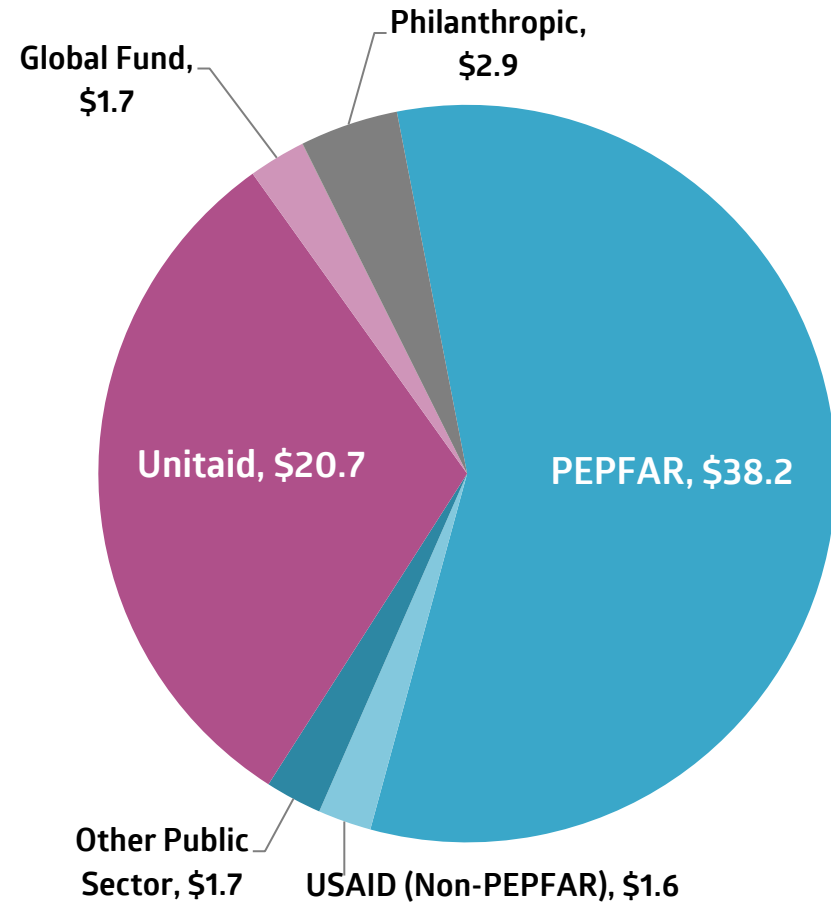

# Cervical Cancer Prevention Funding in Low- and Lower Middle-Income Countries, 2021

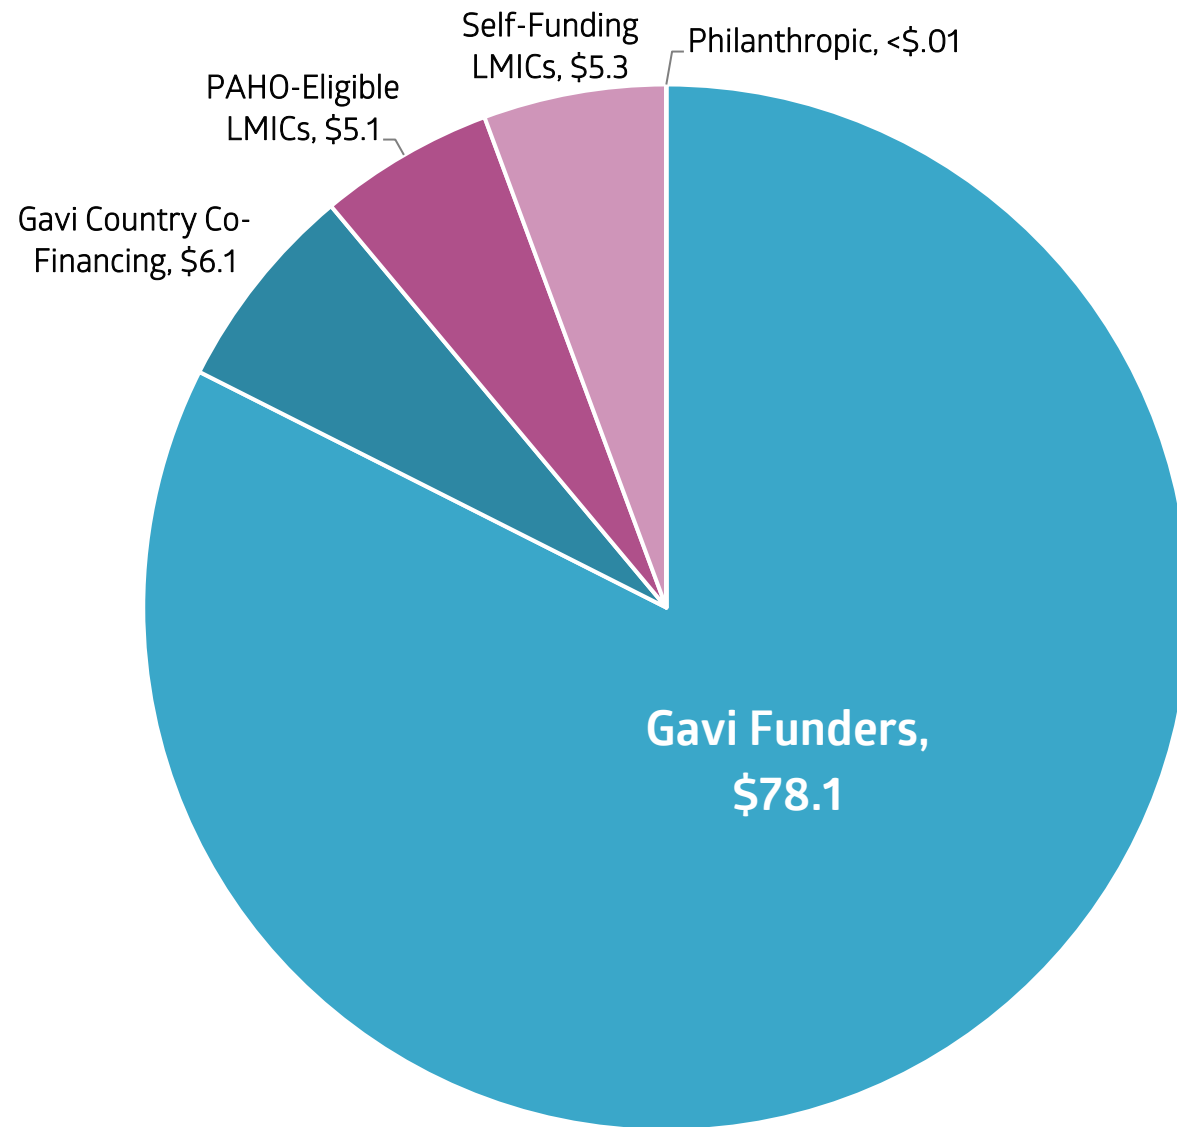

HPV Vaccination  
\$94.7 million

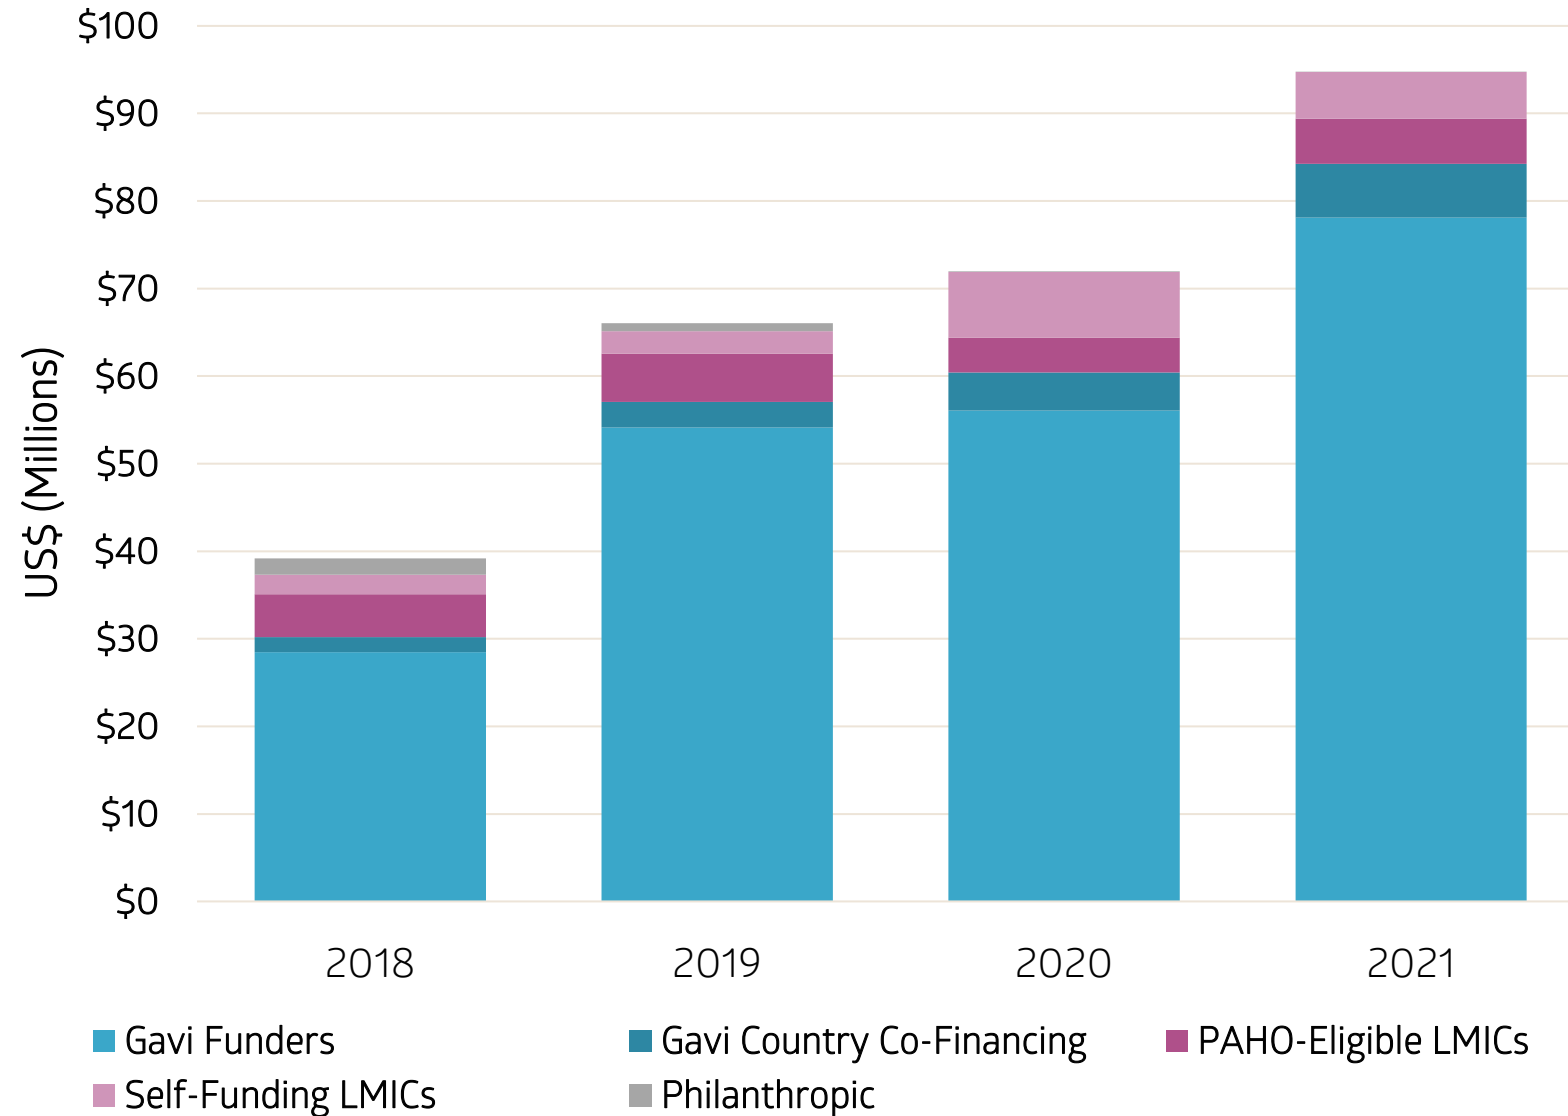

Cervical Cancer Screen-and-and Treat  
\$66.6 million

## Support for HPV Vaccine Programs in LICs and LMICs Totaled \$94.7 Million in 2021.

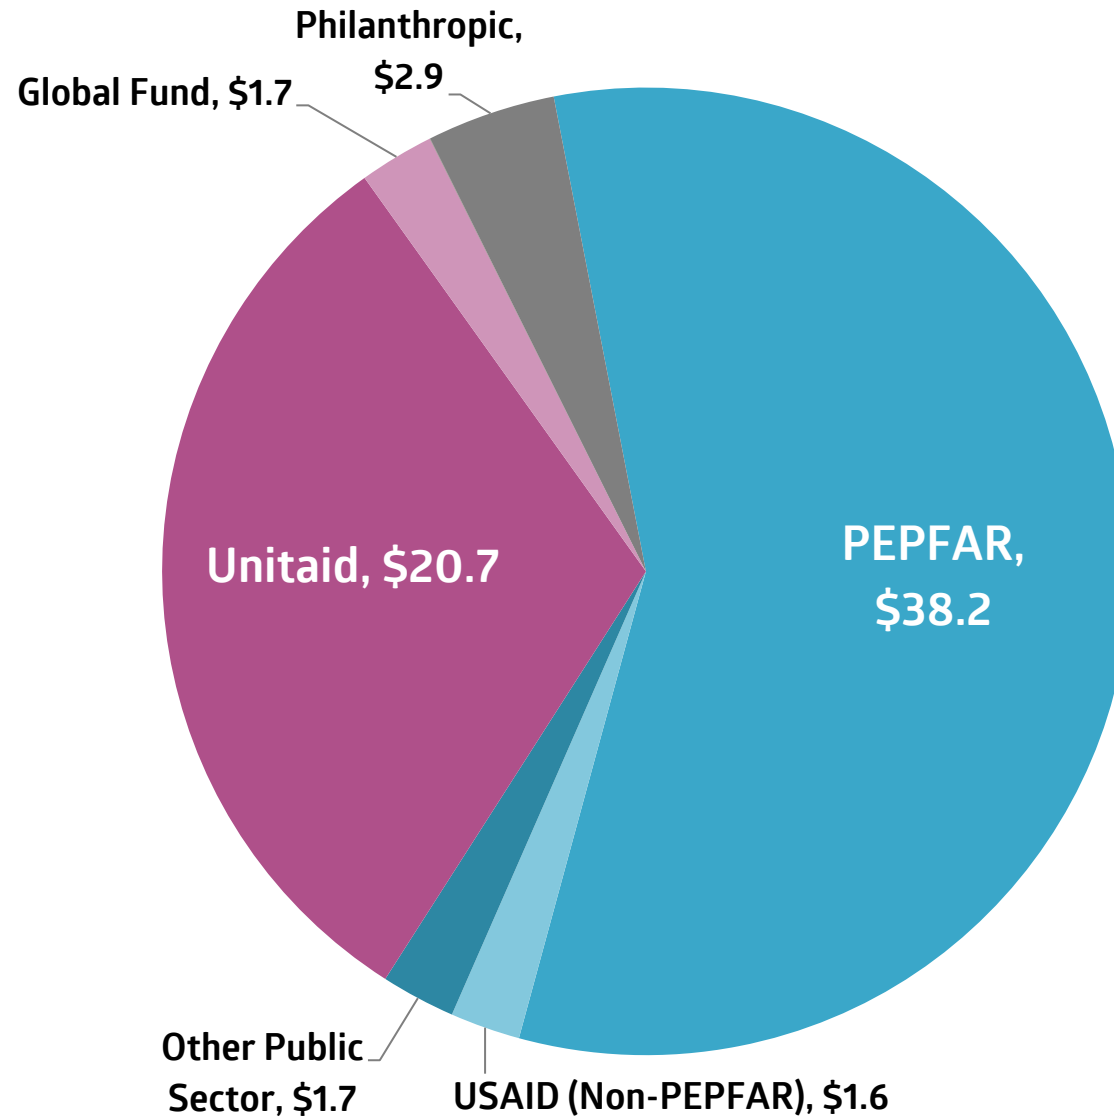

## Support for HPV Vaccine Programs in LICs and LMICs Increased by 31.7% in 2021

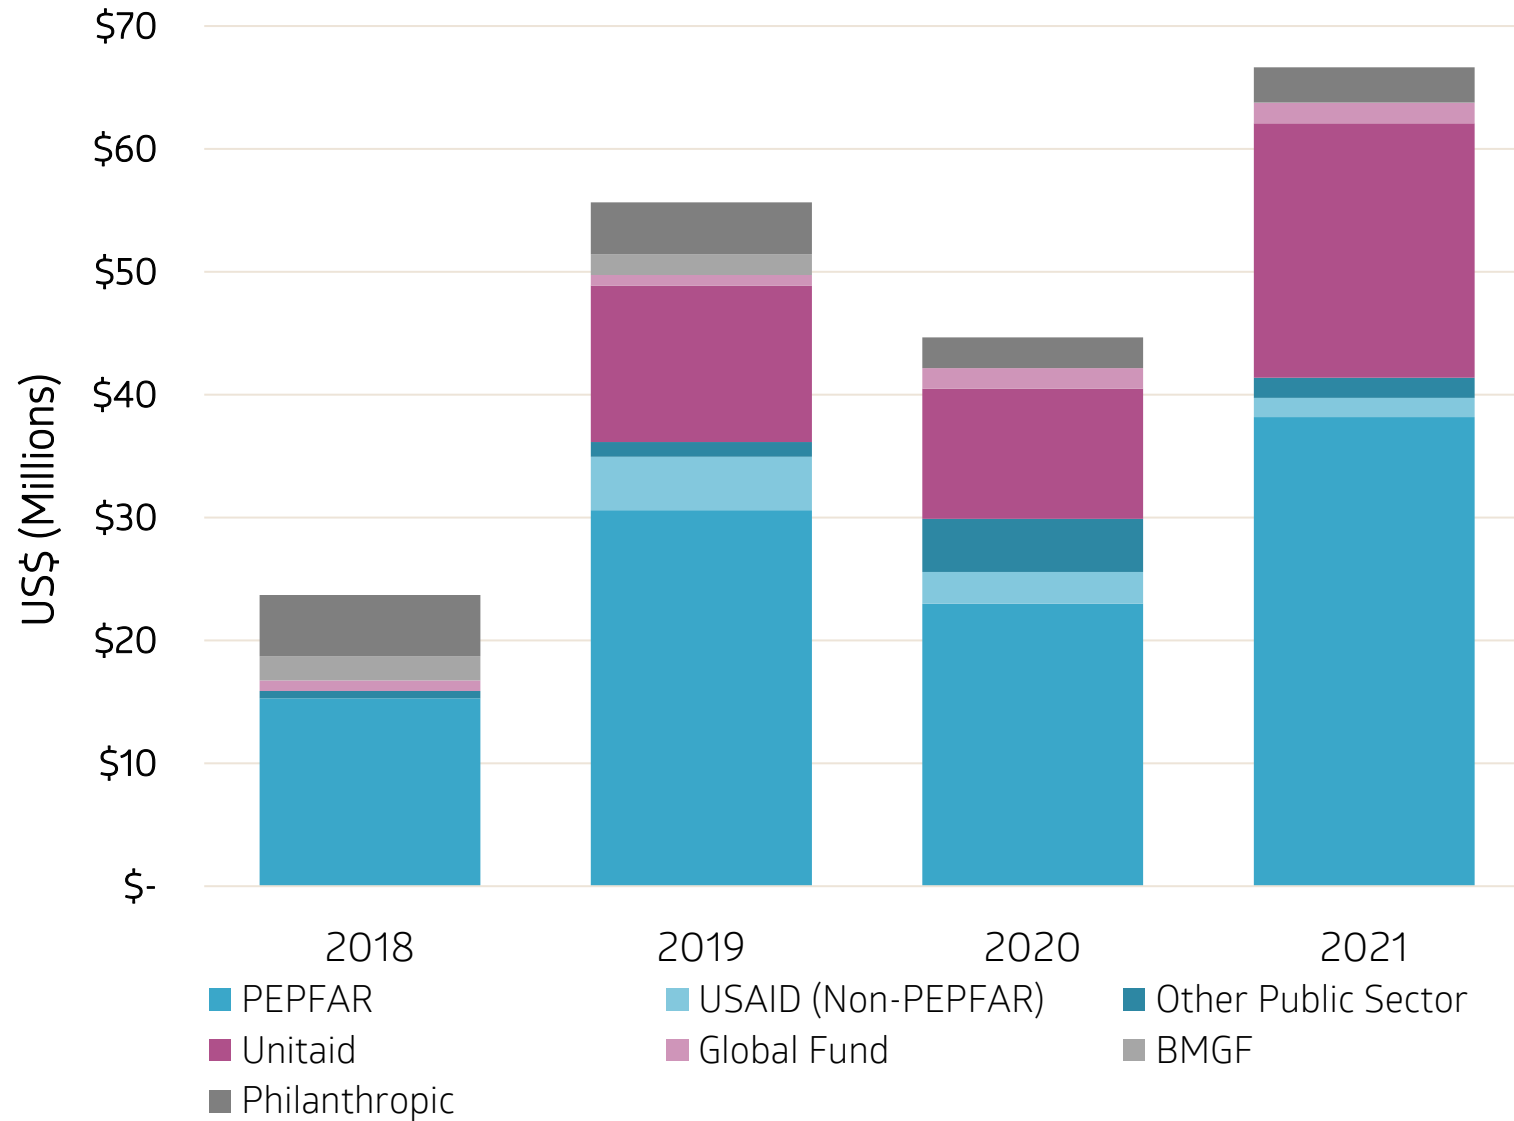

---

**Support for Cervical Cancer Screen-and-Treat in LICs and LMICs totaled \$66.6 million in 2021.**

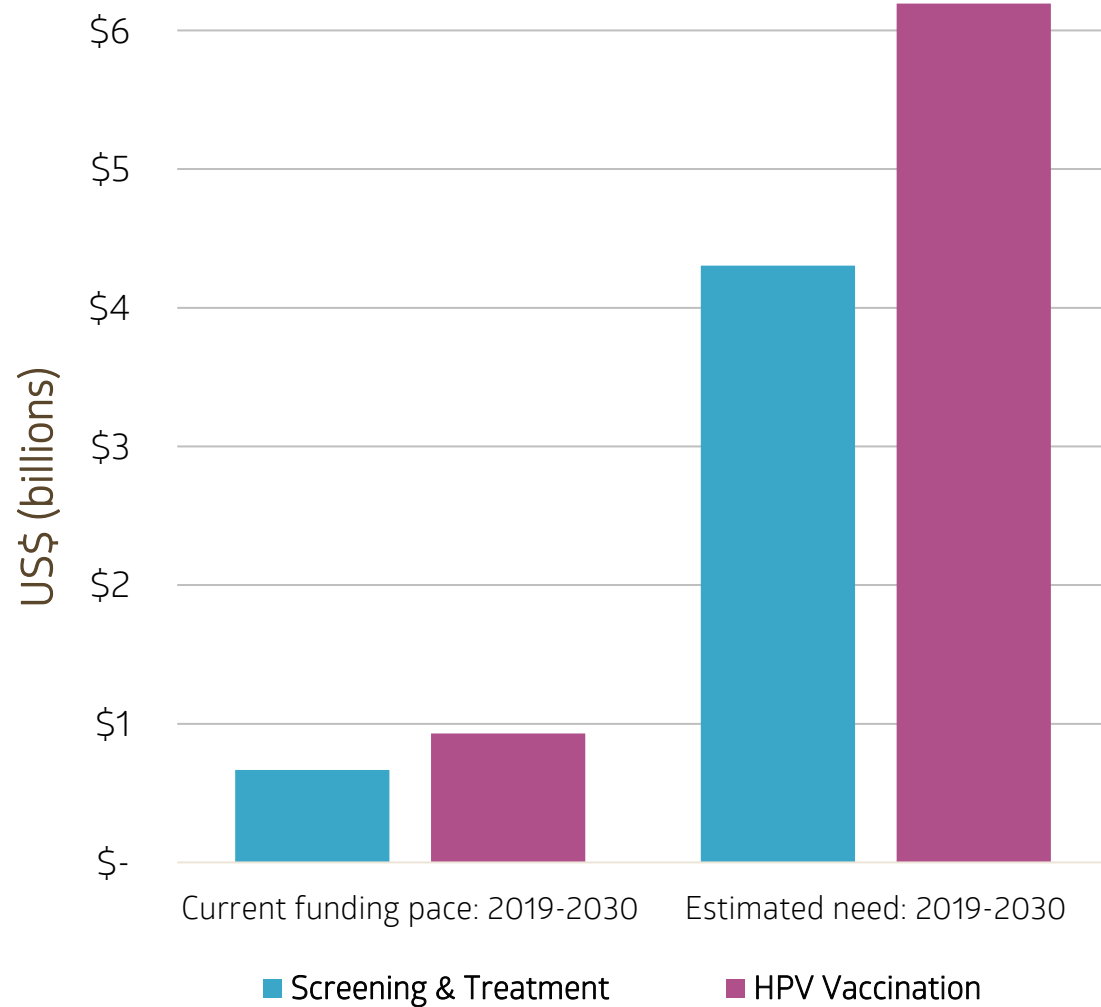

## Support for Cervical Cancer Screen-and-Treat in LICs and LMICs increased by 49.2% in 2021.

At the current pace, only 15% of estimated resources necessary for cervical cancer elimination in LICs/LMICs will be mobilized.
